- 3. (canceled)
- 4. (previously presented) A speaker comprising:
- a magnetic circuit having a center magnetic pole and an air gap;
- a voice coil wound around a voice coil bobbin disposed in the air gap of the magnetic circuit;
 - a frame mounted onto the magnetic circuit;
- a cone-shaped diaphragm made from foamed resin and disposed between the frame and the one end of the voice coil bobbin;
- a support mounted on the center magnetic pole of the magnetic circuit including an induction coil wound around the support; and
- at least one light source held in a holder secured to the end of the support for directing light onto the cone-shaped diaphragm by being energized by the voltage induced in the induction coil.

Appl. No. 10/030,448

Amdt. dated June 21, 2006

Reply to Office action of February 21, 2006

5. (previously presented) A speaker of claim 4, wherein the holder is configured to hold a plurality of light emitting diodes (LEDs) directed to illuminate the cone-shaped diaphragm in radial manner.

- 6. (previously presented) A speaker of claim 4, wherein the light source is controlled to emit light of different color depending on the audio signal to be applied to the voice coil.
- 7. (previously presented) A speaker of claim 5, wherein the light source is controlled to emit light of different color depending on the audio signal to be applied to the voice coil.
